

# SafeVent Light

**SafeVent Light** is a functional base that provides daily ventilation even in bad weather. It is placed under SHEV units as well as under other ventilation units whose ventilation function is restricted by the external weather. Ventilation is ensured by internal ventilation flaps with a size of 200 mm, controlled by an electric or pneumatic drive.

The corrosion-resistant construction of SafeVent Light is made of high-quality recyclable materials.

**SafeVent Light** is available in different sizes, with insulated or non-insulated aluminium base and flange, depending on the customer's requirements. The variability of the unit means that almost any customer requirement can be met.

## TECHNICAL SPECIFICATION:

<b>Width:</b>	from 500 to 2000 mm
<b>Length:</b>	from 1000 to 3000 mm
<b>Construction:</b>	insulated or non-insulated aluminium base with variable flange
<b>Control:</b>	electric motor 230 V or 24 V pneumatic cylinder
